

Visualization of Mental Health During Work via Smartphones and Sensor-Equipped Mice: Joint Development of Software for cocoem. Health Management Service for Businesses, License Provided to SAXA

NAGASE & CO., LTD. (Chuo-ku, Tokyo; Representative Director and President: Kenji Asakura) has entered into a business collaboration agreement with SAXA, Inc. (Minato-ku, Tokyo; President and CEO: Taketo Marui) and Project-vivit Co., Ltd. (Chiyoda-ku, Tokyo; President and CEO: Koichi Ito) for providing the mental health care service cocoem. SAXA began providing this service as of October 21 for companies implementing healthy management and working-style reforms.

With an increasing number of companies incorporating remote work recently, how to keep a handle on employees' mental health has become an issue. The cocoem. service uses a unique algorithm to analyze employees' pulse waves measured through smartphones or computer mice with sensors attached, to visualize daily mental fatigue and changes in stress levels and provide advice for improvement when someone's condition is worsening. This service makes it simple to carry out checks for everyday stress, which was difficult for companies to measure with standard surveys and questionnaires, and makes it possible for companies to quickly recognize changes in the mental health of employees and work to improve it. By collecting data over the long term, it could be used to improve productivity and healthy management.

NAGASE & CO., LTD. and SAXA jointly developed the software for this service. NAGASE & CO., LTD. has provided a use license for the software to SAXA, and is also using its network for sales and marketing of the service. As a "business designer that creates a sustainable future" beyond the bounds of "chemistry" or "a trading company," NAGASE & CO., LTD. will contribute to a sustainable world where people live with peace of mind.

[cocoem.: Jointly Developed by NAGASE & CO. and SAXA, Service Provided by SAXA]
